LOUISIANA • 2018 PARISH PROFILES

Parishes are the core geography for ALICE data: They reveal variations often masked by statewide averages, and the data is reported regularly and reliably.

ALICE IN JEFFERSON PARISH

2018 Point-in-Time-Data

| Population: | 434,051 |
| Number of Households: | 167,596 |
| Median Household Income: | $50,766 (state average: $47,905) |
| Unemployment Rate: | 5.5% (state average: 6.4%) |
| ALICE Households: | 34.0% (state average: 33.0%) |
| Households in Poverty: | 14.0% (state average: 18.0%) |

How Has the Number of ALICE Households Changed Over Time?

ALICE is an acronym for ALICE — Asset Limited, Income Constrained, Employed — households that earn more than the Federal Poverty Level, but less than the basic cost of living for the parish (the ALICE Threshold). While conditions have improved for some households, many continue to struggle, especially as wages fail to keep pace with the cost of household essentials (housing, child care, food, transportation, health care, and a basic smartphone plan).

What Types of Households Are Struggling?

In the past few decades, there have been major shifts in household composition. The share of American adults who have never been married is at a historic high, as is the number of senior households. There is also a growing number of people who live alone or with roommates, and an increasing share of grown children who live with their parents. Yet all types of households continue to struggle: ALICE and poverty-level households exist across all of these living arrangements.

Why Do So Many Households Struggle?

The cost of household basics outpaces wages...

The Household Survival Budget reflects the bare minimum cost to live and work in the modern economy and includes housing, child care, food, transportation, health care, technology (a smartphone plan), and taxes. It does not include savings for emergencies or future goals like college or retirement. In 2018, household costs were well above the Federal Poverty Level of $12,140 for a single adult and $25,100 for a family of four.

...and the labor landscape is challenging for ALICE workers.

A breakdown of the labor force shows a small portion of adults (16 years and older) who are unemployed and a large number who are working. However, a significant portion of full- and part-time workers are paid by the hour; these workers are more likely to have fluctuations in income and less likely to receive benefits. There is also a high number of workers outside of the labor force (people who are not employed and not looking for work), which has helped keep wages low: When more workers are available, employers have less incentive to raise wages to attract employees.

Note: Data for hourly full- and part-time jobs is only available at the national level; these national rates (51% of full-time workers paid hourly and 75% of part-time workers paid hourly) have been applied to the workforce at the county-level to calculate the breakdown shown in this figure. Because this figure sums parish-level data (some using 1-year estimates and some using 5-year estimates), the state percentages may differ slightly from those shown in the 2020 Report. Full-time represents 35 hours per week or more at one or more jobs for 48 weeks per year.
